
Morningstar Multi-Asset Funds

Morningstar Investment Management

Morningstar's Multi-Asset Funds are your gateway to our asset allocation, portfolio construction and research expertise. Our disciplined investment process combined with expert implementation ensures your clients are investing in today's best investment opportunities. These investment solutions have been designed to align with the goals of your clients; increasing wealth, while preserving capital over the market cycle.

MORNINGSTAR[®]

Snapshot of Investor Benefits

- ▶ A comprehensive range to suit the financial goals and risk profile of your clients
- ▶ A focus on delivering more consistent returns by actively managing risk
- ▶ Access to the best global investment opportunities at any given time, without the need to 'time the market'
- ▶ A cost effective solution

How Do We Construct the Multi-Asset Funds?

1

We Start With Your Clients' Financial Goals

Our goal is to help your clients achieve their financial goals by producing more consistent returns with less risk. We don't get hung up about keeping pace with an index or benchmark such as the S&P/ASX200. We are long-term investors, focussing on what matters to your clients - preserving wealth and growing their savings above the rate of inflation.

Capital Preservation

We think about risk differently to other managers who use terms such as 'tracking error' or 'standard deviation'. We use a simpler and more practical definition. We define risk as losing money that can't be made back. Based on this definition of risk, we've designed an investment approach aligned to the needs of investors – preserving their savings, growing their wealth, and not investing in assets if the reward isn't worth the risk.

Introducing the CPI+ Objective

To determine our investment objective, we start with the rate of inflation and add to that an additional amount that can be matched with the risk profile and financial goals of your clients. This gives us a CPI+ objective. So your clients' objectives and ours are the same, namely growing savings above inflation and increasing purchasing power.

Please refer to the 'Morningstar Suite of Multi-Asset Real Return Funds' for more information about the CPI+ objectives of the funds.

Now You Can Buy and Sell Units in Our Funds Just Like Transacting in Shares

The ASX Managed Fund Settlement Service "mFund" enables investors to buy and sell units in unlisted managed funds via an ASX broker. The service replaces traditional paper-based processes and uses the same electronic system (CHESS) for settling – or finalising – ASX share transactions.

There are many benefits for you centred around efficiency, convenience, transparency and speed. For more information please visit <http://www.asx.com.au/mfund>.

Morningstar Valuation Driven Asset Allocation

Determining Asset Classes with the Highest Potential Reward for Risk

Asset Allocation Expertise

Based on our CPI+ objective and desire to preserve capital over the market cycle, we've designed an investment approach that gives us the flexibility to invest in asset classes only if it makes sense to do so. If the reward isn't worth the risk, we're able to avoid the asset class completely. This approach is known as 'Valuation Driven Asset Allocation'. Many other investment managers use a 'Strategic Asset Allocation' approach; the differences are explained below.

A Strategic Asset Allocation or 'set and forget' approach provides little flexibility to move away from high risk asset classes and towards those presenting good value, due to constraints of benchmark weightings. This results in an investment that performs very similarly to an index, and even if the investment were to outperform the index, you may still see negative returns or returns below inflation.

We know that markets change. Our active, Valuation Driven Asset Allocation approach means that we are able to take advantage of opportunities as they arise, rather than at a once a year (or longer) rebalance, as is typically the case with a 'Strategic Asset Allocation' approach.

By removing these constraints, we're able to invest only if the reward is worth the risk.

Strategic Asset Allocation

Little flexibility to move when market conditions change.

Valuation Driven Asset Allocation

Total flexibility to move when market conditions change.

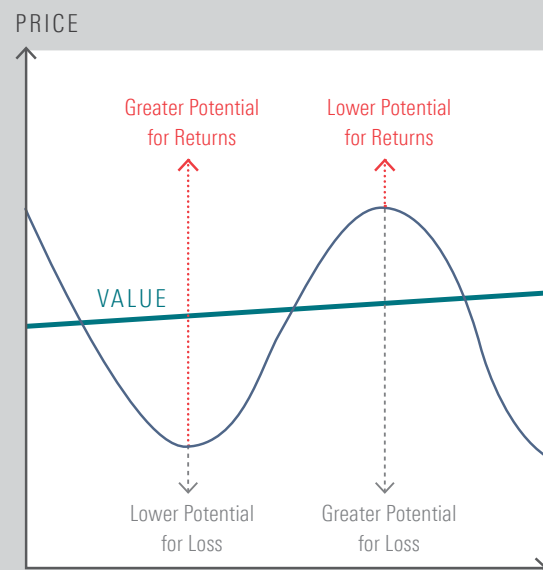

This foundation of our investment process involves the continuous analysis of asset class valuations using our Valuation Driven Asset Allocation framework. This way, we establish which asset classes are undervalued and overvalued, relative to their 'fair value', also known as 'intrinsic value'. In practical terms, we're seeking to invest in assets that are cheap or undervalued and to avoid the expensive or overvalued ones. But it's not just about value. We want to be sure that the assets we hold are of good quality. We do this by undertaking comprehensive research to understand the fundamental drivers behind each investment.

Then we look at investor sentiment. If everyone is buying into an asset class, it's likely that it's a very crowded position. This opens you up to the risks associated with a change in investor behaviour. If sentiment towards the asset class changes, there's a risk of significant capital loss when investors sell out, particularly where valuations are not underpinned by fundamentals. Generally the best time to invest is when sentiment is negative. In other words, we're independently minded, often investing 'against the crowd'.

The output of this process determines the weight of an asset class in each of our multi-asset funds.

Value = Greater Potential For Returns

The potential for return is greater and potential for loss is lower if an asset is cheap, or currently undervalued by the market. If you buy an asset that's expensive or overvalued, we see that as high risk, as you can see on the right hand side of this chart (above the VALUE line).
